第一章 引力波

1.1 Linearized Gravity

[7]. 流形 \mathbb{R}^4 . 任意坐标系 $\{x^\mu\}$, $g_{\mu\nu} = \eta_{\mu\nu} + h_{\mu\nu} = \eta_{\mu\nu} + \gamma_{\mu\nu}s + O(s^2)$, $g^{\mu\nu} = \eta^{\mu\nu} + \gamma^{\mu\nu}s + O(s^2)$, 则 $\delta^\mu_\lambda = \eta^{\mu\nu}\eta_{\nu\lambda} + \gamma^{\mu\nu}\eta_{\nu\lambda}s + \gamma^{\mu\nu}\eta_{\nu\lambda}s + O(s^2)$, 所以 $\gamma^{\mu\nu} = \eta^{\mu\nu}$, $\gamma^{\mu\nu} = \eta^{\mu\sigma}\delta^\nu_\sigma = \eta^{\mu\sigma}\eta_{\sigma\lambda}\eta^{\lambda\nu} = -\eta^{\mu\sigma}\gamma_{\sigma\lambda}\eta^{\lambda\nu} = -\eta^{\mu\sigma}\gamma_{\sigma\lambda}\eta^{\lambda\nu} = -\gamma^{\mu\nu}$, 所以 $g^{\mu\nu} = \eta^{\mu\nu} - \gamma^{\mu\nu}s + O(s^2) = \eta^{\mu\nu} - h^{\mu\nu} + O(s^2)$.

$$R_{\mu\nu\lambda\sigma} = \partial_\sigma\partial_{[\mu}h_{\lambda]\nu} - \partial_\nu\partial_{[\mu}h_{\lambda]\sigma} + O(s^2). \quad (1.1)$$

$$\bar{h}_{\mu\nu} := h_{\mu\nu} - \frac{1}{2}\eta_{\mu\nu}\eta^{\lambda\sigma}h_{\lambda\sigma} = h_{\mu\nu} - \frac{1}{2}\eta_{\mu\nu}h.$$

$$-\frac{1}{2}\partial^\lambda\partial_\lambda\bar{h}_{\mu\nu} + \partial^\lambda\partial_{(\mu}\bar{h}_{\nu)\lambda} - \frac{1}{2}\eta_{\mu\nu}\partial^\lambda\partial^\sigma\bar{h}_{\lambda\sigma} + O(s^2) = 8\pi T_{\mu\nu}. \quad (1.2)$$

存在 $\{x^\mu\}$, 使得 $\partial^\nu\bar{h}_{\mu\nu} + O(s^2) = 0$ (Lorentz gauge). 设 $x'^\mu = x^\mu - \xi^\mu = x^\mu - \zeta^\mu s - O(s^2)$, 则 $\frac{\partial}{\partial x'^\mu} = \frac{\partial}{\partial x^\lambda}\frac{\partial x^\lambda}{\partial x'^\mu} = \frac{\partial}{\partial x^\lambda}(\delta^\lambda_\mu + \frac{\partial\xi^\lambda}{\partial x'^\mu}) = \frac{\partial}{\partial x^\mu} + O(s^2)$, $g'_{\mu\nu} = g_{\lambda\sigma}\frac{\partial x^\lambda}{\partial x'^\mu}\frac{\partial x^\sigma}{\partial x'^\nu} = g_{\lambda\sigma}(\delta^\lambda_\mu + \frac{\partial\xi^\lambda}{\partial x'^\mu})(\delta^\sigma_\nu + \frac{\partial\xi^\sigma}{\partial x'^\nu}) = g_{\mu\nu} + g_{\mu\sigma}\frac{\partial\xi^\sigma}{\partial x'^\nu} + g_{\lambda\nu}\frac{\partial\xi^\lambda}{\partial x'^\mu} = g_{\mu\nu} + (\eta_{\mu\sigma} + O(s))(\frac{\partial\xi^\sigma}{\partial x^\nu} + O(s^2)) + (\eta_{\lambda\nu} + O(s))(\frac{\partial\xi^\lambda}{\partial x^\mu} + O(s^2)) = g_{\mu\nu} + \partial_\mu\xi_\nu + \partial_\nu\xi_\mu + O(s^2)$, 所以 $h'_{\mu\nu} = g'_{\mu\nu} - \eta_{\mu\nu} = g_{\mu\nu} - \eta_{\mu\nu} + \partial_\mu\xi_\nu + \partial_\nu\xi_\mu + O(s^2) = h_{\mu\nu} + \partial_\mu\xi_\nu + \partial_\nu\xi_\mu + O(s^2)$, 因此存在 ξ^μ , 使得 $\partial^\nu\bar{h}'_{\mu\nu} + O(s^2) = 0$ [7]. 令 $\{x^\mu\}$ 满足 $\partial^\nu\bar{h}_{\mu\nu} + O(s^2) = 0$, 则

$$\partial^\lambda\partial_\lambda\bar{h}_{\mu\nu} + O(s^2) = -16\pi T_{\mu\nu}. \quad (1.3)$$

略去 $O(s^2)$ 条件: $h_{\mu\nu}$, $\partial_\lambda h_{\mu\nu}$...小.

1.2 Radiation Gauge

[7]. 存在 $\{x^\mu\}$, 使得 “无源处” $h + O(s^2) = 0$ (TT gauge [8]) 且 $h_{0\mu} + O(s^2) = 0$.

1.3 Quadrupole Approximation

[7]. 下略 $O(s^2)$. 由(1.3)得

$$\bar{h}_{\mu\nu}(t, \vec{r}) = 4 \int \frac{T_{\mu\nu}(t - |\vec{r} - \vec{r}'|, \vec{r}')}{|\vec{r} - \vec{r}'|} dV'. \quad (1.4)$$
